An Introduction to Content Analysis Content analysis is a research tool used to determine the presence of certain words or concepts within texts or sets of texts. Researchers quantify and analyze the presence, meanings and relationships of such words and concepts, then make inferences about the messages within the texts, the writer(s), the audience, and even the culture and time of which these are a part.

As Chalker and Weiner point out in the Oxford Dictionary of English Grammar (1994), "The notion of information content is related to statistical probability. If a unit is totally predictable then, according to information theory, it is informationally redundant and its information content is nil. This is actually true of the to particule in most contexts (e.g.

Singular scalar and vector basis functions have been described and used to analyze two-dimensional cavity resonators and waveguide structures. The singular functions are designed to provide non-analytic DoFs to efficiently model fields near sharp corners and edges. These functions are hierarchical, in the sense that a representation of order p contains the members of order p - 1.
