This book is a collection of refereed invited papers on the history of computing in education from the 1970s to the mid-1990s presenting a social history of the introduction and early use of computers in schools. The 30 papers deal with the introduction of computer in schools in many countries around the world: Norway, South Africa, UK, Canada, Australia, USA, Finland, Chile, The Netherlands, New Zealand, Spain, Ireland, Israel and Poland. The authors are not professional historians but rather people who as teachers, students or researchers were involved in this history and they narrate their experiences from a personal perspective offering fascinating stories.

History of Computing: Learning from the Past Why is the history of computing important? Given that the computer, as we now know it, came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history. Isn't history about 'old things'? Computing, of course, goes back much further than 70 years with many earlier - vices rightly being known as computers, and their history is, of course, important. It is only the history of electronic digital computers that is relatively recent. History is often justified by use of a quote from George Santayana who famously said that: 'Those who cannot remember the past are condemned to repeat it'. It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future, but there is some circularity in this question, as the only way we will know the answer to this is to study our history. This book contains papers on a wide range of topics relating to the history of c- puting, written both by historians and also by those who were involved in creating this history. The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010.

This textbook covers Module 7: Information and Communication for ECDL version 4. Written in a straightforward style, this book will be a useful guide for students studying for the ECDL (European Computer Driving Licence) qualification.

This fully revised text for the European Computer Driving Licence has been updated. It takes students step-by-step through the seven modules of the award, setting tasks and exercises on the way.

Covering theoretical elements such as legal issues associated with computing, health and safety and good practice, this text also covers the practical skills involved in integrating, exporting and analysing data.

Revised for the new specification, this textbook covers all the modules of this qualification. Skills practice helps consolidate learning. Practice material at the end of each module helps prepare students for assessment. A CD-ROM contains answers and recalled text to save time and effort.

Covers all modules of the ECDL qualification and all of the underpinning knowledge your students need to complete their assessment. Screenshots and illustrations using Office 2003 bring the theory to life, making learning easy. Skills practice throughout helps students consolidate what they have learnt. Practice material at the end of each module prepares students for the ECDL assessment. A CD-ROM with the book contains recalled text to save keying-in time, and answers to the exercises in the books.

This book constitutes the thoroughly refereed proceedings of the 10th International Conference on Information and Communication Technologies in Education, Research, and Industrial Applications, held in Kherson, Ukraine, in June 2014. The 16 revised full papers presented were carefully reviewed and selected from 66 submissions. The papers are organized in topical sections on framework and tools; information and communication technologies in teaching and learning; information and communication technologies in research and industrial applications.

Nursing and Informatics for the 21st Century is the follow-up to the highly successful, award-winning first edition. Published in 2006, the first edition was a critical resource in chronicling the huge historical shift in nursing linked to the explosion of EHR national strategies and health policies around the globe. This updated edition, co-published by AMIA, examines the revolution that has occurred in nursing and explores the role IT is playing in this transformation, with a thoughtful examination of nursing practice, science and research, and education across the globe. With nearly 50 case studies written by nursing's leading innovators and recognized leaders across specific segments of the healthcare industry and the globe, the book presents a "snapshot" of nursing and IT adoption worldwide. The book provides in-depth analysis of nursing developments in the United States and an expanded global focus, including profiles of EHR initiatives in the Middle East and Asia. In addition, new topics in this second edition include nursing faculty development and results of a five-country international survey on nursing clinical documentations.

Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. The Doctor of Nursing Practice Essentials assists and advises current DNP students, students considering obtaining the degree, and also serves as a reference for those who have already completed a DNP program. This text is modeled after the eight DNP Essentials as outlined by the American Association of Colleges of Nursing (AACN). Each section discusses the materials relevant to an element of the essentials document and helps students understand the Essentials and complete the steps necessary to fulfill the requirements of the degree.
