Information Technologies and Economic Development in Latin America provides a collection of rigorous empirical studies that contributes to a better understanding of the role and impact of old and new information technologies on Latin American economic development. It provides evidence using randomized and quasi-experimental designed studies for different information and communication technologies interventions. In evaluating their development impact a critical concern has been to contribute to the little existing evidence. In fact, whereas many ICT projects in the developing world have been promoted by multilateral organizations, bilateral aid agencies and nongovernmental organizations in recent years, the extent to which these interventions and policies actually contribute to the development of the region is unclear. The book provides evidence on what works and what does not.

From the mid-1980s, investors in the US increasingly directed capital towards the financial sector at the expense of non-financial sectors, lured by the perception of higher profits. This flow of capital inflated asset prices, creating the stock market and housing bubbles which burst when the imbalance between stagnant incomes and rising debts triggered the banking meltdown. Profitability and the Great Recession analyses these trends in profitability and capital accumulation, which the authors identify as the root cause of the financial crisis, in the context of the US and other major OECD countries. Drawing on insights from Adam Smith, David Ricardo, John Stuart Mill and Karl Marx, the authors interpret the relationship between capital accumulation and profitability trends through the conceptual lens of classical political economy. The book provides extensive empirical evidence of declining rates of US non-financial corporate accumulations from the mid-1960s and profitability trends in that sector falling from post-war highs. In contrast to this, it is shown that there was a vigorous rise of profitability in the financial sector from a 1982 trough to the early part of the twenty-first century, which led to the bloating of that sector. The authors conclude that the long-term falling accumulation trend in the non-financial corporate sector, highlighted by the bankruptcy of major automobile corporations, stands out as the underlying force that transformed the financial crisis into a fully-fledged Great Recession. This book will be of interest to students and researchers in the areas of economics, political economy, business and finance.

This paper provides deeper insights on a few themes with regard to the experience with macroeconomic management in resource-rich developing countries (RRDCs). First, some stylized facts on the performance of these economies relative to their non-resource peers are provided. Second, the experience of Fund engagement in these economies with respect to surveillance, programs, and technical assistance is assessed. Third, the experience of selected countries with good practices in the management of the natural resource wealth is presented. Fourth, the experience of IMF advice in helping RRDCs set up resource funds is discussed. Finally, the main themes and messages from the IMF staff consultation with external stakeholders (CSOs, policy makers, academics) are presented.

This book focuses on how to improve the quality of jobs and meet the aspirations of youth in Sub-Saharan Africa. It finds that a strong foundation for human capital development can be key to boosting earnings, arguing for a balanced approach that builds skills and demand for labor.

This journal has been discontinued. Any issues are available to purchase separately.

This book constitutes the refereed proceedings of the 7th International Workshop on Internet and Network Economics, WINE 2011, held in Singapore, in December 2011. The 31 revised full papers and 5 revised short papers presented together with the abstracts of 3 papers about work in progress were carefully reviewed and selected from 100 submissions. The papers are organized in topical sections on algorithmic game theory, algorithmic mechanism design, computational advertising, computational social choice, convergence and learning in games, economics aspects of security and privacy, information and attention economics, network games and social networks.

Problems of climate change, biodiversity and air pollution are clearly growing globally, but more particularly in Asia because of its economic importance and richness in nature. The increasing interest in environmental and resource economics applied in regions of Asia will make this book an outstanding resource to the existing literature, particularly in the fields of environmental and resource economics and the integration of applied content in traditional and agricultural development. At present there is no single handbook or text on the state of current knowledge in environmental economics in Asia or one which offers a comprehensive guide to students and academics on the subjects of environmental economics research. This book will help to fill the gap in the existing literature.

It would be fair to say that foreign aid today is one of the most important factors in international relations and in the national economy of many

countries - as well as one of the most researched fields in economics. Although much has been written on the subject of foreign aid, this book contributes by taking stock of knowledge in the field, with chapters summarizing long-standing debates as well as the latest advances. Several contributions provide new analytical insights or empirical evidence on different aspects of aid, including how aid may be linked to trade and the motives for aid giving. As a whole, the book demonstrates how researchers have dealt with increasingly complex issues over time - both theoretical and empirical - on the allocation, impact, and efficacy of aid, with aid policies placed at the center of the discussion. In addition to students, academics, researchers, and policymakers involved in development economics and foreign aid, this Handbook will appeal to all those interested in development issues and international policies.

Ambitious in nature, the Istanbul Programme of Action (IPoA) for the Least Developed Countries (LDCs) adopted by the Fourth United Nations Conference on the LDCs (UN LDC IV) in 2011, sets out a development path for LDCs for the coming decade. Successful implementation of the IPoA requires identification of delivery tools for specific targets, provision of necessary financial and non-financial resources, and a strengthened monitoring mechanism. LDC IV Monitor, an independent partnership of eight interested organisations, aims to add value by enhancing transparency, accountability and efficiency of the official monitoring and review mechanism of the IPoA. LDC IV Monitor's first set of two reports, produced outside of the official intergovernmental process, provide credible, evidence-based and policy-oriented assessment of the delivery status of the promises contained in the IPoA. The Synthesis Report, derived from the critical analyses of the state of play concerning the IPoA, presents the broad messages and key recommendations. The volume on Analytical Perspectives addresses a wide spectrum of issues including articulation of a composite IPoA index, building of productive capacity, trade in goods and services, delivery of the Millennium Development Goals (MDGs), flows of different forms of development finance, and consequences of climate change. The publications seek to contribute towards crafting national and international policies to support graduation of the LDCs through structural transformation of their economies.

For policymakers, economics is a useful tool in the development and evaluation of public policy. And like many sciences, economics is evolving to become more interdisciplinary in its approach. Today, economic theory is often used in conjunction with insights gleaned from psychology and sociology to create a more inclusive, real-world approach to implementing public policy. In this book, five award-winning economists tackle a diverse range of topics and show how applied economics has evolved to give policymakers a more nuanced approach to policy development. The award-winning economists included in this volume are Erica Field, Nancy Folbre, Avner Grief, David M. Kreps, and Michael J. Piore, and the topics they discuss include microfinance, human capital, societal institutions, worker motivation, and workplace regulation.
