Dyeing and printing are the two major wet processing techniques for coloration of fabric. In the dyeing process; only one color is produced but in the printing process; various types of colored design are produced on the fabric surface. Dyeing is done on grey fabric but printing could be done on both pre-treated fabric and colored fabric.

Dyeing & Printing || Differences Between Dyeing And ...

Dyeing and printing processes are value-added treatments for most textile materials. A dyeing process is the interaction between a dye and a fibre, as well as the movement of dye into the internal part of the fibre. Generally, a dyeing process involves adsorption (transfer of dyes from the aqueous solution onto the fibre surface) and diffusion (dyes diffused into the fibre).

Dyeing Process - an overview | ScienceDirect Topics

Dyeing is done on grey fabric but printing can be done on both pre-treated fabric and colored fabric. Difference between dyeing and printing: Dyeing process differ from printing process. 1.For dyeing, dyes are applied on the whole fabric equally. For printing, dyes are applied on the fabric localizedly to produce desired design.

Printing. Printing is a process of decorating textile fabrics by application of pigments, dyes, or other related materials in the form of patterns. Although apparently developed from the hand painting of fabrics, such methods are also of great antiquity. There is evidence of printing being carried out in India during the 4th century bce, and a printing block dated at about 300 ce has been unearthed in the burial grounds of Akhm?n in Upper Egypt.

Textile - Printing | Britannica

Dyeing and printing are different applications; in printing, color is applied to a localized area with desired patterns. In dyeing, it is applied to the entire textile. The primary source of dye, historically, has been nature, with the dyes being extracted from animals or plants. Since the mid-19th century, however, humans have produced artificial dyes to achieve a broader range of colors and to render the dyes more stable to washing and general use.

Dyeing - Wikipedia

Chemical: a modern textile printing method, commonly achieved using two different classes of fiber reactive dyes, one of which must be of the vinyl sulfone type. A chemical-resisting agent is combined with dye Type A, and printed using the screenprint method and allowed to dry. A second dye, Type B, is then printed overtop.

Resist dyeing - Wikipedia

Batik, an Indonesian wax-resist dye technique. Image via Real Margaria Batik. Woodblock printing and resist-dyeing are perhaps the oldest and most labor-intensive ways to put a design on fabric and interestingly enough, they make two halves of a whole.

4 Fabric Printing Techniques - Discharge, Resist ...

Dyeing in textiles is a process in which color is transferred to a finished textile or textile material (like fibers and yarns) to add permanent and long-lasting color. It can be done by hand or by...

What is Dyeing in Textiles? - Video & Lesson Transcript ...

Natural fibers—such as cotton, linen, silk, and wool—take dye much better than synthetics do. Dyeing is as much an art as a science, so don't hesitate to experiment. For example, we like combining liquid dyes to come up with our own colors. Modify this technique for items other than fabric, immersing them in the dye and taking note of how each item takes the color.
