Five complications commonly requiring emergency management are addressed in this review. Specifically, superior vena cava syndrome may warrant radiation, chemotherapy, vascular stenting, or surgical resection. Malignant pericardial effusion may require emergency pericardiocentesis if cardiac tamponade develops.

are just starting out in this profession. Cancer
Diagnosis and Treatment Evaluation

ESMO Handbooks | Medical Oncology Education

This 2 day course will cover many of the common oncological emergencies that a patient with a cancer diagnosis may experience. It will cover the incidence, patient groups at risk, diagnosis and initial management of the oncological emergency. The ability to recognise symptoms and alert appropriate health care professionals will also be covered.
